

TOM

LEARNING AND THERAPY SYSTEM

TOM INTEGRATES TACTILE, VISUAL AND AUDITORY SKILLS

TOM enables learning by touching! TOM is an interactive, simple teaching concept using objects of reference with software that recognises the objects being placed on the Activity-Board (USB connection to the PC). TOM provides users who have developmental, perception difficulties and sensory impairment, with a range of concepts and tasks that are beneficial to learning, promote interactive skills and are fun

and easy to achieve. It is possible to work with TOM completely without using mouse and keyboard.

The objective of TOM is to understand the meaning of symbols (initiation of communication) and the pronunciation of words. Due to the pedagogically sophisticated structure of the system (concrete objects – abstract objects – letters) it is possible to develop certain

concepts in the fields of visual/auditory perception, memory training, seriality, letters and numbers.

Own objects: There is even the possibility to add own objects to the programme, such as a cup or a spoon or photos. The object is created easily, the voice output is recorded and the object can be used within the different sessions.

TOM speaks different languages: The system can be used in order to learn a foreign language, as it has been translated into various languages.

A very simple programme: The simplicity and the needs of the user have especially been taken into account when creating the system. TOM has no distracting features so the user can focus attention on the task in hand. The black background provides a good contrast and the wooden objects are very robust.

FIELDS OF APPLICATION

- Perception problems
- Early intervention
- More need of coaching
- Eye-Hand-coordination
- Motor activity
- Memory training
- Visual impairments

TARGET GROUPS

- Special schools
- Therapeutic pedagogical kindergartens
- Occupational therapy
- Speech therapy
- Neurology
